nail caps
for cats

The simple
solution
to destructive
scratching.

Introducing Soft Paws® CLS Nail Caps for cats!

Soft Paws CLS helps save your furniture—and they're safe for cats!

Soft Paws CLS Nail Caps are the painless, non-surgical solution for cats' destructive scratching. Developed by a veterinarian, Soft Paws are vinyl nail caps designed to fit easily over your cat's claws, without harming your cat. They're easy to apply and long-lasting, too. Each application takes only minutes and lasts up to 6 weeks!

An effective, humane alternative

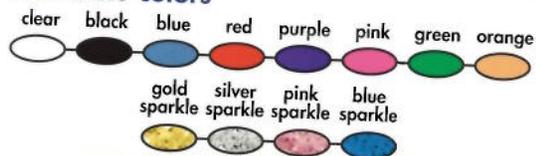

If you've tried other methods to prevent scratching, you'll appreciate the simplicity and effectiveness of Soft Claws Nail Caps. Training cats to stop scratching can be a time-consuming test of patience. Trimmed nails become sharp again in days. What's more, Soft Claws are a humane alternative to declawing or placing a cat for adoption.

Available in 4 sizes to fit every cat

Soft Claws CLS are available in 4 sizes to fit all cats. See the accompanying size chart to determine your cat's appropriate size. Plus, caps come in many fashionable, fun colors: clear, black, blue, red, purple, pink, green, orange, gold sparkle, silver sparkle, pink sparkle, blue sparkle and seasonal colors (such as holiday green & red).

Kitten	Under 5 lbs. (12-16 weeks old)
Small	Weight 6-8 lbs.
Medium	Weight 9-13 lbs.
Large	Weight 14 lbs. and up

Available colors

Soft Paws CLS—the simple solution for destructive scratching!

- Helps protect infants and seniors with sensitive skin
- Prevents cats with skin conditions from injuring themselves with hind claws
- Great for outdoor cats living indoors temporarily
- Safe and effective for cats of all ages
- One application lasts up to 6 weeks
- Doesn't affect nail extension or retraction

Special Features—CLS Nail Caps

Each adult feline nail cap is now embedded with a series of self-locking cleats, which offer an improved grip. The new Soft Paws CLS nail caps also feature the Soft Cuff™, which fits snugly around your cat's nail. Combined with the cleats, this cuff helps to improve overall adhesion.

Nail Cap Training

During the initial training phase, your cat may attempt to chew off nail caps, until he or she adjusts to wearing them. Consequently, nail caps may fall off. This is a normal training behavior. Replace nail caps as necessary.

Further, your cat will shed his or her nails every 4 to 8 weeks. This, too, is normal for healthy cats. Simply apply new nail caps as needed. If nails are not shedding properly, avoid overgrown nails by trimming them every 8 weeks.

See the package insert for more application information.
